

# AVA-REFLECTOMETER

ACCESSORY

PRICE STARTING AT \$9,950

## Parylene Thickness Measurement

Parylene coatings are ultra-thin and uniform coatings that provide a number of high-value surface treatment properties such as moisture, chemical and dielectric properties, and thermal and UV stability. These properties make parylene coatings an ideal choice for a number of applications throughout the medical device, electronics, transportation and aerospace industries. In order to ensure the coatings are uniform, a monitoring system is needed. For these types of measurements we have developed a system called the Ava-Reflectometer. Our new Ava-Reflectometer is an easy to use package that incorporates a halogen light source, a reflection probe and the AvaSpec-Mini to perform reflection, thin film, and parylene thickness measurements.

Transmission/reflection spectrum from the Thin Film package for Parylene C sample

Transmission/reflection spectrum from the Thin Film package for Parylene F.

## System Details

Ava-Reflectometer	
Application	Thin Film/Reflection
Wavelength range	360 - 1100 nm
Spectrometer	Avaspec-Mini, DCL-U/VIS; OSC filter, Slit-25
Grating	Grating VA: 360-1100 nm
Housing	Sheet metal case white powder coated paint
Light Source	integrated - 10W tungsten halogen source
Power Requirement	110/220V DAC - 12V-2.08A
Software	Avasoft full feature spectroscopy software or Parylene measurement software
Dimensions, weight	234 x 166 x 144 mm, 1400 grams
Sample Stage	Convenient stage to hold samples with external light blocking shroud
Laptop	Del Inspiron Laptop or comparable option Will be preloaded with reflectometer software

## APPLICATIONS & INDUSTRIES SERVED BY AVANTES

**Agriculture & Food**  
Food Sorting  
Precision Agriculture

**Semiconductor**  
Thin Film Coating  
End-Point Detection

**Environmental**  
Contamination &  
Pollution Monitoring

**(Bio)Medical**  
Blood Analysis  
Cancer Detection

**System Integration**  
Integrate into your  
product or system
